ALTERNATIVE CLEANING METHODS:

1. BLEACH
   To disinfect the SecureVac cushions, use a mixture of 1 part bleach (~6% sodium hypochlorite active ingredient) with 10 parts water.
   
   *Rinse the SecureVac bags with clear water to remove all bleach residue as there may be color change to the bags. The functionality of the bags will unlikely be compromised.

   *Bionix cannot attest to the bleach disinfection efficacy rate. For solution strength and dwell time by 3M and CDC, please click [here](#) and [here](#)

2. WHAT NOT TO USE
   Do not use alcohol based products on SecureVac Cushions.
